In continuum mechanics, stress is a physical quantity that expresses the internal forces that neighbouring particles of a continuous material exert on each other, while strain is the measure of the deformation of the material which is not a physical quantity. For example, when a solid vertical bar is supporting an overhead weight, each particle in the bar pushes on the particles immediately ...

Moment of inertia is defined as the ratio of the net angular momentum of a system to its angular velocity around a principal axis, that is $I = \frac{L}{\omega}$. If the angular momentum of a system is constant, then as the moment of inertia gets smaller, the angular velocity must increase.
