Modular arithmetic can be handled mathematically by introducing a congruence relation on the integers that is compatible with the operations on integers: addition, subtraction, and multiplication. For a positive integer  $n$ , two numbers  $a$  and  $b$  are said to be congruent modulo  $n$ , if their difference  $a - b$  is an integer multiple of  $n$  (that is, if there is an integer  $k$  such that  $a - b = kn$ ).

Over the years, a variety of floating-point representations have been used in computers. In 1985, the IEEE 754 Standard for Floating-Point Arithmetic was established, and since the 1990s, the most commonly encountered representations are those defined by the IEEE. The speed of floating-point operations, commonly measured in terms of FLOPS, is an important characteristic of a computer system ...
