The large intestine, also known as the large bowel, is the last part of the gastrointestinal tract and of the digestive system in vertebrates. Water is absorbed here and the remaining waste material is stored as feces before being removed by defecation.. The colon is the largest portion of the large intestine, so many mentions of the large intestine and colon overlap in meaning whenever ...

Large intestine - Wikipedia

The only known example in nature of a part that can spin all the way around to push an organism is the flagellum. The flagellum is a tail used like a propeller to push single-celled prokaryotes. The bacterial flagellum is the best known example. About half of all known bacteria have at least one flagellum. This means that rotation may actually be the most common way of moving around found in nature.
