definitive answer, and a great deal of research has been done since. These are not just academic questions; today the market in financial derivatives is larger than the market in stock securities. In other words, more money is invested in options on stocks than in stocks themselves. Options have

been around for a long time.

The Basics of Financial Mathematics

What is Financial Math. Financial Mathematics is the application of mathematical methods to financial problems. (Equivalent names sometimes used are quantitative finance, financial engineering, mathematical finance, and computational finance.) It draws on tools from probability, statistics, stochastic processes, and economic theory.

Compound Interest is calculated on the initial payment and also on the interest of previous periods. Example: Suppose you give \$100 to a bank which pays you 10% compound interest at the end of every year. After one year you will have $\$100 + 10\% = \110 , and after two years you will have $\$110 + 10\% = \121 .
