### **Answers To The Menstrual Cycle**

The secretory phase of the menstrual cycle begins after ovulation when the ruptured graafian follicle develops into the corpus luteum. The corpus luteum produces progesterone which causes the endometrium to begin secreting various substances which make the uterus more receptive to implantation of a fertilised ovum.

The menstrual cycle is complex and controlled by many different glands and the hormones that these glands produce. The four phases of the menstrual cycle are menstruation, the follicular phase, ovulation and the luteal phase. Common menstrual problems include heavy or painful periods and premenstrual syndrome (PMS).

### **Menstrual cycle - Better Health Channel**

So im 15 years old and have had my period since i was twelve and its always been very very irregular. ill skip it for four or five months, and then have my period for a full month. i bleed very very heavily (my last period was 15 days and i bleed through 200 pads and 100 super tampons) my cramps are so bad i cant attend school. i have told my mother about this, and she told the doctor who said ...

### **Is my menstrual cycle? | Yahoo Answers**

They usually mature one at a time, in alternating ovaries. This rhythmic maturation of eggs and the other chemical and physical events that accompany the process are called the menstrual cycle. As a reaction to increasing levels of the hormone FSH (follicle stimulating hormone) eggs start to mature in a woman's ovary.
