Genomics is an interdisciplinary field of biology focusing on the structure, function, evolution, mapping, and editing of genomes. A genome is an organism's complete set of DNA, including all of its genes. In contrast to genetics, which refers to the study of individual genes and their roles in inheritance, genomics aims at the collective characterization and quantification of genes, which ...

BLAT (BLAST-like alignment tool) is a pairwise sequence alignment algorithm that was developed by Jim Kent at the University of California Santa Cruz (UCSC) in the early 2000s to assist in the assembly and annotation of the human genome. It was designed primarily to decrease the time needed to align millions of mouse genomic reads and expressed sequence tags against the human genome sequence.

Sequenciamento de DNA é o processo de determinação da ordem dos nucleotídeos de um dado fragmento de DNA. Até o momento, a maioria dos sequenciamentos de DNA foram feitas usando o método de terminadores de cadeia (método de Sanger) desenvolvido por Frederick Sanger. Esta técnica tem como princípio a terminação sequência-específica da reação de síntese de DNA utilizando ...

Introduction. Cell death is crucial for normal development, homeostasis, and the prevention of hyperproliferative diseases such as cancer (Fuchs and Steller, 2011, Thompson, 1995). It was once thought that almost all regulated cell death in mammalian cells resulted from the activation of caspase-dependent apoptosis (Fuchs and Steller, 2011, Thompson, 1995).
