Although water-insoluble cyclodextrin-epichlorohydrin polymers have been known for half a century, these materials are of continued interest to the scientific community, in particular for their interesting environmental applications as sorbents in liquid-solid sorption processes.

Solubility Rules as a Table. If you need to memorise the solubility rules for ionic compounds in water at 25°C, then the list above is useful. However, all that information can be placed in a table as shown below, which makes it easier to locate solubility information for a particular ionic compound made up of a particular cation and a particular anion.

How do we define the concentration of a solution? How do we calculate concentration? What units do we use for concentration? What is molarity? How do we use moles to calculate the mass of a substance to make up a specific volume of a solution of specific concentration? All is explained with fully worked out example questions.

A discussion of chemical hot and cold packs can really warm up a classroom lesson on thermochemistry. In this hands-on activity, students use a coffee cup calorimeter to measure the heat of solution of a chemical salt using 3 different masses and then design their own hot and/or cold pack.

All the species, reactant and product species, are gases. At equilibrium, the rate at which NO₂ molecules break apart to form N₂O₄ molecules is the same as the rate at which N₂O₄ break apart to make NO₂ molecules.. The equilibrium position will be determined by the . concentration of the gases (the amount of each gas in a given volume)
