The list of patterns produced is exhaustive: Every pattern in the molecule, up to the pathlength limit, is generated. For all practical purposes, the number of patterns one might encounter by this exhaustive search is infinite, but the number produced for any particular molecule can be easily handled by a computer.. Because there is no pre-defined set of patterns, and because the number of ...

As soon as the genetic code was biochemically cracked (Nirenberg et al., 1965), its non-random structure became evident (Woese, 1965, Crick, 1968). The most obvious pattern that emerged in the code was its regular redundancy. The code comprises 16 codon families beginning with the same pair of bases, and these families generally consist of either one or two equal series of codons
