The main difference between one-step equations and two-step equations is that one more step you need to do in order to solve a two-step equation. That additional step may be something like multiplying the variable by a certain number to get rid of a fraction in front of it. Otherwise, the rules are the same as before and these equations are just as easy to learn and solve as are the one-step ones

Two-step equation worksheets have a huge collection of practice pages to solve and verify the equations involving integers, fractions and decimals. Also, translating two-step equations, MCQs and word problems based on geometric shapes are given here for additional practice. In these worksheets solve the two-step equations with integer coefficients.

Two-Step Equation Worksheets - Math Worksheets 4 Kids

A two-step equation is as straightforward as it sounds. You will need to perform two steps in order to solve the equation. One goal in solving an equation is to have only variables on one side of the equal sign and numbers on the other side of the equal sign. The other goal is to have the number in front of the variable equal to one.

Equivalent equations are equations that have identical solutions. Thus, $3x + 3 = x + 13$, $3x = x + 10$, $2x = 10$, and $x = 5$. are equivalent equations, because 5 is the only solution of each of them. Notice in the equation $3x + 3 = x + 13$, the solution 5 is not evident by inspection but in the equation $x = 5$, the solution 5 is evident by inspection.

Solving Two Step Equations involves primarily two steps, hence the name "Two Step

Equations."Solving Two Step Equations involves using properties of equality. The first step in solving Two Step Equations is to get all of the constants (numbers) on one side of the equal sign, and the coefficient with the variable on the other side. In order to do this you must use the addition and ...

Objective: I know how to solve 2-step equations. In the equation $3x - 2 = 16$, notice that the variable is being multiplied and has a term being subtracted. To isolate the variable, we need to add 2 to both sides and then divide both sides by 3. Look at the lesson on Solving Two-Step Equations if you need help on how to solve two-step equations.

2-Step Equations Worksheet and Solutions

Two step algebraic equations are relatively quick and easy -- after all, they should only take two steps. To solve a two step algebraic equation, all you have to do is isolate the variable by using either addition, subtraction, multiplication, or division.

Two-step algebraic equations require two steps to be solved. As in one-step equations, the goal is to simplify the equation and isolate the variable on one side of the equation and numbers on the other side. Two-step equations, however, require more than one mathematical step to solve. An example of a two-step equation is $3x + 4 = 16$.
