Answer: Sometimes . Step-by-step explanation: When chords intersect in a circle, the vertical angles formed intercept sometimes congruent arcs as when the two chords in a circle intersect, they form the vertex of an angle within a circle and the measure of the angle is equal to one-half the sum of the measures of the two arcs intercepted by the angle and its vertical angle.

Given two intersecting lines or line segments, the amount of rotation about the point of intersection (the vertex) required to bring one into correspondence with the other is called the angle theta between them. The term "plane angle" is sometimes used to distinguish angles in a plane from solid angles measured in space (International Standards Organization 1982, p. 5).

The oldest known sundial is from Egypt; it dates back to around 1500 BC (19th Dynasty), and was discovered in the Valley of the Kings in 2013. Sundials have their origin in shadow clocks, which were the first devices used for measuring the parts of a day. Ancient Egyptian obelisks, constructed about 3500 BC, are also among the earliest shadow clocks.
