Biology: Biochemical Evidence for Evolution Background Information: If two organisms have similar DNA molecules, they must have similar amino acids and thus similar proteins. Therefore, DNA comparisons can be made by examining the sequences of amino acids within a protein.

Biology: Biochemical Evidence for Evolution

Biochemical Evidence for Evolution -Adapted from McDougal Littell – Biology Labs INTRODUCTION: One method scientists use to help determine the evolutionary relationships between organisms is to analyze and compare the molecular structure of proteins. Recall that proteins are made up of chains of amino acids.

Lab Report: Biochemical Evidence for Evolution This project was very quick and easy to do with my group. It helped me get a better understanding of the animals that are most and least related to humans. This lab focuses on biochemical evolution and how natural precipitation works. I hypothesized that based on animal morphology, humans are most closely related to chimpanzees, then monkeys, then ...

c. Use this data to show how biochemical evidence can be used to support evolution. Procedure Part A: Amino Acid Sequence 1) Read the amino acid sequences from left to right beginning at the upper right hand corner of figure 39-1. Compare the sequences of humans to the sequences of gorillas and horses. An example of a

Origins and biochemical evidence. By studying the basic biochemistry shared by many organisms, we can begin to piece together how biochemical systems evolved near the root of the tree of life. However, up until the early 1980s, biologists were stumped by a "chicken and egg" problem: in all modern organisms, nucleic acids (DNA and RNA) are necessary to build proteins, and proteins are necessary ...

Origins and biochemical evidence - Evolution

The theory of evolution is supported by biochemical evidence; many of the same molecules and

biochemical processes occur within all living organisms, from single-cell bacteria to humans. Originally, scientists couldn't understand how the process of evolution began, but they later discovered that RNA possesses catalytic properties.

Origins and experimental evidence. Experiments can help scientists figure out how the molecules involved in the RNA world arose. These experiments serve as "proofs of concept" for hypotheses about steps in the origin of life — in other words, if a particular chemical reaction happens in a modern lab under conditions similar to those on early Earth, the same reaction could have happened on ...
