**Tissue Membranes.** A tissue membrane is a thin layer or sheet of cells that covers the outside of the body (for example, skin), the organs (for example, pericardium), internal passageways that lead to the exterior of the body (for example, abdominal mesenteries), and the lining of the moveable joint cavities. There are two basic types of tissue membranes: connective tissue and epithelial ...

My article series on the accuracy of body fat testing has always been one of the more popular series on my site. Body composition tests are purely rough estimates, based on other variables that correlate with body composition. However, these tests are based on numerous assumptions, such as that fat-free mass has a certain density.. Of course, it's been shown that these assumptions often don't ...

Throughout this chapter, we will express embryonic and fetal ages in terms of weeks from fertilization, commonly called conception. The period of time required for full development of a fetus in utero is referred to as gestation (gestare = “to carry” or “to bear”). It can be subdivided into distinct gestational periods.

Play a game of Kahoot! here. Kahoot! is a free game-based learning platform that makes it fun to learn – any subject, in any language, on any device, for all ages!

View the entire document in PDF or locate the section of interest separately below. Historical Radiography Curricula also are available for review.

The choice of consumption toys in the market and information about ethical self may be overwhelming to a new dog owner. Ago are the days when dogs got a delicious bone from Grandma's leftovers, or a butcher could be relied on to keep suitable bones for a special canine treat.

Spina bifida is a birth defect in which there is incomplete closing of the spine and membranes around the spinal cord during early development. There are three main types: spina bifida occulta, meningocele and myelomeningocele. The most common location is the lower back, but in rare cases it may be the middle back or neck. Occulta has no or only mild signs.

Although bone densitometry is often used as a surrogate to evaluate bone fragility, direct biomechanical testing of bone undoubtedly provides more information about mechanical integrity.

The INFUSE Bone Graft is considered medically necessary for treating skeletally mature persons with acute, open tibial shaft fractures that have been stabilized with intramedullary nail fixation after appropriate wound management, when INFUSE Bone Graft is applied within 14 days after the initial fracture.
