In dimensional analysis, a ratio which converts one unit of measure into another without changing the quantity is called a conversion factor. For example, kPa and bar are both units of pressure, and  $100 \text{ kPa} = 1 \text{ bar}$ . The rules of algebra allow both sides of an equation to be divided by the same expression, so this is equivalent to  $100 \text{ kPa} / 1 \text{ bar} = 1$ .

### **Dimensional analysis - Wikipedia**

Before you perform an examination, obtain relevant information from the referring clinician. Don't let the clinician simply 'order' a sonogram or CT, but discuss the patient's age and posture, laboratory results and the number one clinical diagnosis and differential diagnosis.
