And mount this after the usbcore module has been loaded. More information is available in the USB Guide under "USB Device Filesystem". In 2.2 and 2.4 kernels this directory should be created when you load usbcore, however there will be no content till you mount usbfs (the new name for usbdevfs).

### Linux USB FAQ

@Quinma, this method can work remotely with only slight modifications... Instead of running `init 1`, manually kill every system daemons except `sshd`. I also think at this point you should be remounting all filesystems RO and saving to `tmpfs` (assuming your temp files will fit in ram) to avoid overwriting the files with the temp data.

### How to recover a removed file under Linux? - Super User

The term filesystem has two somewhat different meanings, both of which are commonly used. This can be confusing to novices, but after a while the meaning is usually clear from the context. One meaning is the entire hierarchy of directories (also referred to as the directory tree) that is used to organize files on a computer system. On Linux and Unix, the directories start with the root ...
