Stardog extends SPARQL for path queries which can be used to find paths between two nodes in a graph. Path queries are similar to SPARQL property paths that recursively traverse a graph and find two nodes connected via a complex path of edges. But SPARQL property paths only return the start and end nodes of a path.

Introduction What is Prescriptive Analytics? "Prescriptive analytics is the application of logic and mathematics to data to specify a preferred course of action. While all types of analytics ultimately support better decision making, prescriptive analytics outputs a decision rather than a report, statistic, probability or estimate of future outcomes."

In mathematics, a divergent series is an infinite series that is not convergent, meaning that the infinite sequence of the partial sums of the series does not have a finite limit.. If a series converges, the individual terms of the series must approach zero. Thus any series in which the individual terms do not approach zero diverges.
