In mathematics, an integral assigns numbers to functions in a way that can describe displacement, area, volume, and other concepts that arise by combining infinitesimal data. Integration is one of the two main operations of calculus, with its inverse operation, differentiation, being the other. Given a function f of a real variable x and an interval $[a, b]$ of the real line, the definite integral

Terminology note: We are using $P(x)$ (with a capital P) to denote the cumulative probability distribution function. Specifically, $P(x)$ is the total amount of probability measure to the left of x . The probability density is then dP/dx . I am aware that many people think of the probability density (as shown in figure 2) as “the” probability, and denote it by P or p .
