To get the force of the child on the seesaw, we use the mass times gravity equation, which is 25 times 9.8, which equals 245 newtons. So now we have the perpendicular distance and the force.

Torque in Physics: Equation, Examples & Problems - Video ...

"I know that most men, including those at ease with problems of the greatest complexity, can seldom accept even the simplest and most obvious truth if it be such as would oblige them to admit the falsity of conclusions which they have delighted in explaining to colleagues, which they have proudly taught to others, and which they have woven, thread by thread, into the fabric of their lives."

Errors and "science myths" in K-6 Science Textbooks

The term solid in physics denotes a state of matter having a fixed volume and a definite shape, which is not generally compressible. Solids display the following properties : - The particles are ...

Properties of covalent solids - answers.com

Since prehistory humans have noticed the stars, of course. Over the course of a human life-time and even many generations don't seem to move much, except for the daily westward overall circling and the much slower overall motion due to the precession of the equinoxes. Both daily circling and precessions are physically caused by the motions of the Earth, of course---but this was not understood ...

Freeman Dyson - Wikipedia

$F = ma$. Newton's second law of motion, stated earlier, shows that force is equal to mass multiplied by acceleration, or in shorthand form, $F = ma$. To reiterate a point already made, if one assumes that force is constant, then mass and acceleration must have an inverse relationship.

The Virtual Nuclear Tourist

Of all the scientific terms or concepts that ought to be more widely known to help to clarify and inspire science-minded thinking in the general culture, none are more important than "science" itself. Many people, even many scientists, have traditionally had a narrow view of science as ...

WHAT SCIENTIFIC TERM OR CONCEPT OUGHT TO BE MORE WIDELY ...

A fractal is an object or quantity that displays self-similarity, in a somewhat technical sense, on all scales. The object need not exhibit exactly the same structure at all scales, but the same "type" of structures must appear on all scales. A plot of the quantity on a log-log graph versus scale then gives a straight line, whose slope is said to be the fractal dimension.
