Cervical cancer forms in the interior lining of the cervix, the junction of the vagina and uterus. The development of cervical cancer is typically slow, and occurs over a period of years. The progression to cervical cancer begins with the development of precancerous changes in normal cells. Most of these changes, even if left untreated, will not progress to cancer.

How many people do know who say that they have a "sweet tooth"? Ever hear someone say that they are "addicted" to sugar? Sugar and its role in our diet has, indeed, become a controversial topic. Many have blamed the rise in overweight and obesity in our country on sugar. Our intake of sugar has increased, but so has our intake of artificial sweeteners.

RECIST criteria were updated in early 2009 , based on an analysis of the literature and simulations from a database of > 6500 patients and > 18,000 lesions. The new version is called version 1.1 (with the previous version becoming 1.0). The main changes were to reduce the number of target lesions to be measured and take into account the specificity of lymph nodes by measuring their short axis.
