In the following lab, you will determine the atomic mass for the element "beanium". There are three naturally occurring isotopes of beanium: white-beanium, brown-beanium, and speckled-beanium. You will calculate the average atomic mass of a given sample of beanium. Objective 1. Calculate average atomic masses Materials (per lab group ...

What was the purpose of this lab? Was the average mass of the beans a whole number or a decimal? Explain why. If you were to compare your lab group's finding with any other lab group's findings would there be differences between the atomic mass of your . beanium. sample and that of the other lab group? Explain why.
