### **Activity Two: The Classic Fossil Lab - Simple Format**

The phylogenetic position of stylophorans within deuterostomes has been a contentious matter for decades. In the early 1960s, the stylophoran appendage was interpreted as a feeding arm, comparable in morphology to the feeding structures of various extant echinoderms (Ubaghs, 1968, David et al., 2000, Lefebvre, 2003). In this hypothesis, stylophorans are considered bona fide echinoderms, with ...

The largest organisms now found on Earth can be determined according to various aspects of an organism's size, such as: mass, volume, area, length, height, or even genome size. Some organisms group together to form a superorganism (such as ants or bees), but such are not classed as single large organisms. The Great Barrier Reef is the world's largest structure composed of living entities ...

Lest anyone think that the Cambrian Explosion is a minor or insignificant artifact of the fossil record, take note of the evolutionary hypothesis of Punctuated Equilibrium, that absolutely crippled the idea of slow and gradual evolution and turned the evolutionary world on its head and was the source of one of the most bitterly contentious disputes in all of blind evolutionary thinking.

### **Cambrian explosion points to creation not evolution ...**

Feeding behaviour: Feeding behaviour, any action of an animal that is directed toward the procurement of nutrients. The variety of means of procuring food reflects the diversity of foods used and the myriad of animal types. The living cell depends on a virtually uninterrupted supply of materials for its metabolism.
