An unbalanced Chemical Equation only tells us which compounds react With eachother and what the Product is. A balanced Equation also tells us how many molecules of each reactant, and how many molecules of Product in a reaction. When you are doing calculations (exampel calculating grams of Product), you should use the balanced Equation. Hope this was helpfull :)

In a chemical reaction, one or more reactants are transformed into products: reactants  $\rightarrow$  products. The purpose of a chemical equation is to express this relation in terms of the formulas of the actual reactants and products that define a particular chemical change. For example, the reaction of mercury with oxygen to produce mercuric oxide would be expressed by the equation
