Inquiry-based learning (also enquiry-based learning in British English) is a form of active learning that starts by posing questions, problems or scenarios. It contrasts with traditional education, which generally relies on the teacher presenting facts and his or her knowledge about the subject. Inquiry-

based Learning is often assisted by a facilitator rather than a lecturer.

To behaviorists, social skills are learned behaviors that allow people to achieve social reinforcement. According to Schneider & Byrne (1985), who conducted a meta-analysis of social skills training procedures (51 studies), operant conditioning procedures for training social skills had the largest effect size, followed by modeling, coaching, and social cognitive techniques.
