Tendons and ligaments in the horse are the “belts” and “cables” that hold bones in place and allow the muscles to do their jobs in creating propulsion– forward, backward, sideways, and ...

Tendons and Ligaments: Anatomy and Physiology - The Horse

Just to clarify, carrying a box in most cases is not considered work. For something to be considered work, the force you apply and the distance you apply must be in the same direction.. In the case of carrying the box, you are using a vertical force to lift it, while you are going horizontally in distance. This means that zero work is being done as the force and distance are not applied in the ...

What are some examples of work? | Socratic

Please note: this subject was previously known as Human Biosciences B. In this subject, students will continue with the study of anatomy and physiology and apply the concepts of human structure and function introduced in HBS101, to the musculoskeletal and nervous systems.
