Animal Classification In order for us to understand how all living organisms are related, they are arranged into different groups. The more features that a group of animals share, the more specific the group is. Animals are given scientific names so that people all around the world can communicate about animals, no matter what language they speak (these names are traditionally Latin words).

Archaea seem to have shown up soon after Bacteria. Some theories even think Archaea may have come first. Archaea are all single-celled organisms, but many have specialized and can be found in the most extreme environments: near Hydrothermal vents deep in the ocean, at the Great Salt lake in Utah, and even at temperatures that would fry nearly all other living species.
