FRQ AP Biology Model Test 2 | CourseNotes

The correct answer is (A). In general, if an organism shares a very similar morphological characteristic or similar DNA sequences with another organism, they are more likely to be closely related than organisms with different structures and DNA sequences.

AP Biology Practice Test 2: Common Ancestry | High School ...

C: Increased rinderpest prevalence would lower wildebeest populations, increasing the amount of grass (because wildebeests feed on the grass) and providing more material to start and spread fires, thereby decreasing the number of trees. Choice (C) is thus correct. Choice A is incorrect because more rinderpest means fewer wildebeests, which in turn leads to more grass.
