Sjogren syndrome likely results from a combination of genetic and environmental factors (it appears to be multifactorial). Several different genes appear to affect the risk of developing the condition, but specific genes have not been confirmed. Simply having one of these genes does not cause a person to develop the disease. Some sort of "trigger" is also needed, such as a viral or bacterial ...

Matrilineality is the tracing of kinship through the female line. It may also correlate with a social system in which each person is identified with their matriline – their mother's lineage – and which can involve the inheritance of property and/or titles. A matriline is a line of descent from a female ancestor to a descendant (of either sex) in which the individuals in all intervening ...
