Assessing The Effectiveness Of Antivirus

Un antivirus è un software finalizzato a prevenire, rilevare ed eventualmente rendere inoffensivi codici dannosi e malware per un computer come virus, adware, backdoor, BHO, dialer, fraudtool, hijacker, keylogger, LSP, rootkit, spyware, trojan o worm.. Al giorno d'oggi, [senza fonte] [] un antivirus da solo non è in generale in grado di proteggere un computer da tutte le tipologie di minacce ...

Antivirus - Wikipedia

This chapter discusses software tools and techniques auditors can use to test network security controls. Security testing as a process is covered, but the focus is on gathering the evidence useful for an audit.

Summary: A weakness in the DICOM image format enables malware to infect patient data by directly inserting itself into medical imaging files. These hybrid files are both fully-executable malware binaries and fully-functioning, standards-compliant DICOM images that preserve the original patient data and can be used by clinicians without arousing suspicion.
