Ok so I have a question about binomial distribution this is the question. How do I do this on the calculator???? During the 2006 Turin Winter Olympics, a survey of Team USA found that 70.8% of the athletes had previously experienced one or more bone fractures. Let's assume that this finding is representative of all athletes involved in winter competitive sports.

Binomial Distribution Question????? | Yahoo Answers

Binomial distribution is the discrete probability distribution with parameters n and p . This is the basis for the popular binomial test of statistical significance. In a binomial distribution there are always two mutually exclusive events (as binomial means two). They are termed as fail and success.

Binomial Distribution - Formula & Examples

Mean and Variance of Binomial Distribution. If p is the probability of success and q is the probability of failure in a binomial trial, then the expected number of successes in n trials (i.e. the mean value of the binomial distribution) is. $E(X) = \mu = np$. The variance of the binomial distribution is. $V(X) = \sigma^2 = npq$

Binomial Distribution: Example #1. Objective: Compute probabilities and quantiles for a binomial random variable representing the number of correct guesses on a multiple-choice test and visualize these quantities using the Binomial Applet. Problem Description: A multiple choice test has four possible answers to each of 16 questions. A student guesses the answer to each question, i.e., the ...

The binomial distribution tends toward the Poisson distribution as $n \rightarrow \infty$, $p \rightarrow 0$ and np stays constant. The Poisson distribution with $\lambda = np$ closely approximates the binomial distribution if n is large and p is small. The Poisson distribution is typically used as an approximation to the true underlying reality.

That pattern is the essence of the Binomial Theorem. Now you can take a break. When you come back see if you can work out $(a+b)^5$ yourself. Answer (hover over): $a^5 + 5a^4b + 10a^3b^2 + 10a^2b^3 + 5ab^4 + b^5$

Binomial Distribution Practice TI83/84 In each binomial experiment, state S, p, q, n, x, write the probability question, and find the requested probability. When needed, recall that $P(x) = \binom{n}{x} p^x q^{n-x}$ and V. You will need the Binomial program, or Binompdf(n,p,x) & Binomcdf(n,p,x) to find many of these answers.
