Harlequin syndrome is a syndrome affecting the autonomic nervous system. The autonomic nervous system is responsible for controlling the body's natural processes such as sweating, skin flushing, and the response of the pupils to stimuli. People with Harlequin syndrome have the absence of sweating and flushing of skin on one side of the body (unilateral), especially of the face, arms, and chest.

Motivation involves the biological, emotional, social, and cognitive forces that activate behavior. In everyday usage, the term motivation is frequently used to describe why a person does something. For example, you might say that a student is so motivated to get into a clinical psychology program that she spends every night studying.
