I think there are also solutions out there for Apostol's Mathematical Analysis. Also, I think you asked a question about this exercise back in November? I did finally get around to updating that. I don't have anything insightful to say about the motivation for the problem, but at least the solution should now be mathematically correct (I hope).

Does there exist a solution manual of Apostol's Mathematical Analysis which contains the solution of the exercises given in Chapter 12 (Multivariable Differential Calculus)? I found one in library genesis but that contains only chapter 1-9. It'd be much appreciated if anyone can give me any lead.

I have an option to choose between the two books Mathematical Analysis by Tom Apostol and Principles of Mathematical Analysis by Walter Rudin as I was gifted Rudin by a friend and ended up buying the other book as well. I will be indebted if someone told me which one is the tougher one and which one is better for the self-learner (I am in high school and have no access to a professor or anyone).

Tom Apostol, who is still alive and enthusiastic about all kinds of mathematics, is well known for several textbooks on calculus at all levels. My first encounter was with his undergraduate text. I've had this book on my shelf for many years now and I regularly resort to it when I need clarification of points in analysis.

PRINCIPLES OF MATHEMATICAL ANALYSIS.

Apostol's treatment of basic topology as an extension of set theory is particularly good! Once you have a clear understanding of limits as they relate to topology then you'll finally "get" the whole delta-epsilon arguments from calculus. As an introductory text to the world of mathematical analysis I don't think this book can be beat.
