First we make a diagram in standard position. The attempted flight path of the plane is vector OX. Notice that the angle shown is 50° because the 40° bearing is measured clockwise from North. The vector XY represents the wind from the South. The vector OY is the resultant path of the plane, affected by the wind. In the diagram shown below, the known magnitude and angle are labeled.

Word Problems: Vectors - Non-Right Triangle Relationships

Most bearing word problems involving trigonometry and angles can be reduced to finding relationships between angles and the measurements of the sides of a triangle. In this case, finding the right basic trigonometric functions to relate the angles and measurements are crucial for setting up and solving the problem correctly. Trigonometry of angles and sides can be used on a daily basis in the ...
