Best Answer: Actually The Sound Of Music was not in most instances a true story. About the only things real in the musical were the family name, where they were from and that the father married the childrens nanny. They were not a fan of the nazi regime that is true but they weren't as opposed to it as the ...

Why did the Van Trapps (from "The Sound of Music") oppose ...

Question 9. Answer: The pitch of a musical sound depends on the frequency of the wave. The higher the frequency higher the pitch. The loudness of a musical note depends on its amplitude, distance of the observer from the source. Quality or timbre of a musical note depends on the wave form produced by it.

Sound - Test Questions | Tutorvista.com

I would liken the use of the word Sound in this context to follow Oxford's definition 1.1 under the adj form.. Based on reason, sense, or judgment. Ex: the scientific content is sound. So considering that the idiom 'scapegoating' is generally used with a negative connotation the sentence is saying.

meaning - To be sound in doing something? - English ...

Last night, I asked this question: "I am a gay man. I am 18. My personality usually changes. I have two personalities. For a period of 2-6 months, sometimes I will be very neat and tidy and have OCD-like symptoms. I will scrub every inch of my house and usually throw tantrums and scream that everything is sloppy. I will also become very conservative during that time and hate my

Image via telegraph.co.uk. The question, "So, what do you sound like?" has a familiar ring to most musicians, and for many, it's difficult to answer. It can be tempting to try to get it over with as quickly as possible and just toss out your genre (for many - your grandma's friends, for example - that answer's probably good enough), but there are reasons it's worth your time to put a ...

How to Respond When People Ask What Your Music Sounds Like

Use this technique to find a formula for the intensity I of a sound, in terms of the sound level β and the reference intensity I_0 . There will be a quantity (10 dB) involved in your calculations. When you enter your answer, leave off the unit dB

The range of sound intensity that humans can detect is so large (spans 13 orders of magnitude). The intensity of the faintest sound that is audible is called the Threshold of Hearing. This has an intensity of about $1 \times 10^{-12} \text{ W m}^{-2}$. Because it is difficult to gain intuition for numbers in such a huge range it is desirable that we come up with a scale to measure sound intensity that ...
