There's an old expression, "water seeks its level." The physics behind water's tendency to flow until all of it is at the same level is related to potential energy— energy stored in forces such as those of gravity. The higher water is, the more gravitational potential energy it has. Water, like ...

Theoretical physics is a branch of physics that employs mathematical models and abstractions of physical objects and systems to rationalize, explain and predict natural phenomena. This is in contrast to experimental physics, which uses experimental tools to probe these phenomena.. The advancement of science generally depends on the interplay between experimental studies and theory.

I'm beginning to suspect that there are actually (at least) two different theoretical HEP physicists named Nima Arkani-Hamed out there. One of them (who I'll call Nima1) believes the way to understand the fundamental nature of physical reality involves extremely complicated extensions of the Standard Model, with large numbers of parameters tuned to avoid conflict with observation, and ...
