1 Introduction. sed is a stream editor. A stream editor is used to perform basic text transformations on an input stream (a file or input from a pipeline). While in some ways similar to an editor which permits scripted edits (such as ed), sed works by making only one pass over the input(s), and is consequently more efficient. But it is sed's ability to filter text in a pipeline which ...

sed, a stream editor - GNU

This is where iptables come in handy. Iptables is a Linux command line firewall that allows system administrators to manage incoming and outgoing traffic via a set of configurable table rules..

Iptables uses a set of tables which have chains that contain set of built-in or user defined rules.

Thanks to them a system administrator can properly filter the network traffic of his system.
