Extrinsic factors such as parent material, climate, topography and hydrology may influence potential values of soil properties to such a degree that it is impossible to establish universal target values, at least not in absolute terms. Soil quality assessment thus needs to include baseline or reference values in order to enable identification of management effects.

1. Introduction. Risk assessment models today play an increasing role in data protection, as recently confirmed by the EU General Data Protection Regulation (hereinafter GDPR). 1 Various types of assessment models can be adopted: they may be mandatory or voluntary, self-assessments or third-party/licensing schemes. They can only assess specific kinds of data processing or types of risk.
