Geometry Prisms: Congruent bases connected by lateral faces which are parallelograms. If the lateral faces are rectangles, the prism is called a right prism. If the lateral faces are not rectangles, the prism is called oblique. Prisms and Pyramids 10.1 Altitude Pyramids: A single base connected by triangular lateral faces which meet at a point. A pyramid is right if the apex is aligned above ...

The answer depends on whether the field on P1 can be changed dynamically by the user, and if you want the regions to hide/show as the field is changed; or if the field is static (i.e. set once at page load time) and so we only need to show/hide the regions when the page is first loaded.

Although APEX has a built-in user management concept called "Groups" I must confess I have never used it, and a quick perusal of the documentation doesn't make it clear to me how you use these to control access (but see Tom's answer here for that).. You will probably need to create user/role tables within your database and use these in conjunction with APEX Authorization Schemes to control ...

In general, a cone is a pyramid with a circular cross section. A right cone is a cone with its vertex above the center of its base. However, when used without qualification, the term "cone" often means "right cone." In discussions of conic sections, the word "cone" is taken to mean "double cone," i.e., two cones placed apex to apex. The double cone is a quadratic surface, and each single cone ...

Consider a hemisphere placed on the base of a square pyramid (having side lengths and height ). Further, let the hemisphere be tangent to the four apex edges. Then what is the volume of the hemisphere that is interior the pyramid (Cipra 1993)? . From Fig. (a), the circumradius of the base is . Now find in terms of and . Fig. (b) shows a cross section cut by the plane through the pyramid's apex ...

The expansion and development of geometry through Islamic art and architecture can be related to the significant growth of science and technology in the Middle East, Iran, and Central Asia during the 8th and 9th centuries; such progress was prompted by translations of ancient texts from languages such as Greek and Sanskrit (Turner, 1997). By the 10th century, original Muslim contributions to ...

A multibody dynamic (MBD) system is one that consists of solid bodies, or links, that are connected to each other by joints that restrict their relative motion. The study of MBD is the analysis of how mechanism systems move under the influence of forces, also known as forward dynamics. A study of the inverse problem, i.e. what forces are necessary to make the mechanical system move in a ...
