Biology: Biochemical Evidence for Evolution Background Information: If two organisms have similar DNA molecules, they must have similar amino acids and thus similar proteins. Therefore, DNA comparisons can be made by examining the sequences of amino acids within a protein.

**Biology: Biochemical Evidence for Evolution**

The most convincing evidence of descent from a common ancestor comes from the similarities in the biochemical composition and physiological activities of organisms. 1) Enzymes and hormones: in the same manner similar or identical enzymes and hormones, are found in large number of animal groups.

The theory of evolution is supported by biochemical evidence; many of the same molecules and biochemical processes occur within all living organisms, from single-cell bacteria to humans. Originally, scientists couldn't understand how the process of evolution began, but they later discovered that RNA possesses catalytic properties.

All of biochemical evidence supports evolution, but that's not the real question, the real question is, "what biochemical evidence refutes evolution?", to which the answer is "Absolutely none". The whole science supports evolution, and that's one of many reasons evolution is beyond reasonable doubt, until new evidence comes to light.
