Mechanics (Greek μηχανική) is that area of science concerned with the behaviour of physical bodies when subjected to forces or displacements, and the subsequent effects of the bodies on their environment. The scientific discipline has its origins in Ancient Greece with the writings of Aristotle and Archimedes (see History of classical mechanics and Timeline of classical mechanics).

Contrail Modeling and Simulation. Contrails, short for condensation trails, are line-shaped ice clouds visible behind aircraft that spread under conditions of high ambient humidity and evolve into cirrus that can last for a few hours, becoming indistinguishable from natural cirrus when viewed by satellite instruments.

In fluid dynamics, a stall is a reduction in the lift coefficient generated by a foil as angle of attack increases. This occurs when the critical angle of attack of the foil is exceeded. The critical angle of attack is typically about 15 degrees, but it may vary significantly depending on the fluid, foil, and Reynolds number.. Stalls in fixed-wing flight are often experienced as a sudden ...
