An aqueous solution is a solution in which the solvent is water. It is mostly shown in chemical equations by appending (aq) to the relevant chemical formula. For example, a solution of table salt, or sodium chloride (NaCl), in water would be represented as $\text{Na} + (\text{aq}) + \text{Cl} - (\text{aq})$. The word aqueous (comes from aqua) means pertaining to, related to, similar to, or dissolved in, water.

This page profiles water-treatment schemes other than those involving permanent magnets or magical "catalysts". All of these I consider "dubious" in the sense that there is no credible evidence in the reputable scientific or engineering literature that these devices work, and in most cases there is no reason, based on present scientific knowledge, to believe that they even can work.
