An optical fiber is a flexible, transparent fiber made by drawing glass or plastic to a diameter slightly thicker than that of a human hair. Optical fibers are used most often as a means to transmit light between the two ends of the fiber and find wide usage in fiber-optic communications, where they permit transmission over longer distances and at higher bandwidths (data rates) than electrical ...

Optical fiber - Wikipedia

Transduction - injured tissue releases chemicals that propagate the pain message; an action

potential moves along an afferent fiber to the spinal cord. Transmission - pain impulse moves from the level of the spinal cord to the brain. Perception - conscious awareness of pain Modulation - the neurons from the brainstem release neurotransmitters that block the pain impulse.
