The material balance can be simplified depending on what type of reservoir we are interested in analyzing. The single-phase gas reservoir is the most simple. We'll cover calculating gas in place using the material balance. The material balance equation can be simplified, as all the terms for oil production, liquid expansion and rock expansion can be neglected.

Adequate clearance is essential between propeller blade tips and sternframe in order to minimise the risk of vibration. As blades rotate water immediately ahead of the blades is compressed and at the blade tips this compression can be transmitted to the hull in the form of a series of pulses which set up vibration.
