1. INTRODUCTION - A transistor is a small electronic device that can cause changes in a large electrical output signal by small changes in a small input signal. That is, a weak input signal can be amplified (made stronger) by a transistor. For example, very weak radio signals in the air can be picked up by a wire antenna and processed by transistor amplifiers until they are strong enough to be ...

Modern American candy (Post Civil War--1920s). The Industrial Revolution made possible many new candies. Advances in food technology, scientific knowledge, and cooking apparatus made possible items such as jelly beans and chocolate. Most 19th century American cookbooks do not include recipes for making chocolate candy because it was primarily made by professional confectioners.
