Overview. The most basic type of integral equation is called a Fredholm equation of the first type, $\phi(x) = \int_a^b K(x, y) f(y) dy$. The notation follows Arfken. Here ϕ is an unknown function, f is a known function, and K is another known function of two variables, often called the kernel function. Note that the limits of integration are constant: this is what characterizes a Fredholm equation.

Bessel functions, first defined by the mathematician Daniel Bernoulli and then generalized by Friedrich Bessel, are the canonical solutions $y(x)$ of Bessel's differential equation $x^2 y'' + x y' + (x^2 - \alpha^2) y = 0$ for an arbitrary complex number α , the order of the Bessel function. Although α and $-\alpha$ produce the same differential equation, it is conventional to define different Bessel functions for these two ...
