Note how n starts at 5 and ends at 14. So we are looking for the sum of terms 5 - 14. We will use the formula for the sum of the first n terms of an arithmetic sequence, , to help us with this problem. Basically we need to find three things: the first term of the sequence, the last term of the sequence, and how many terms of the sequence we are adding in the series.

Arithmetic sequences are used throughout mathematics and applied to engineering, sciences, computer sciences, biology and finance problems. A set of problems and exercises involving arithmetic sequences, along with detailed solutions and answers, are presented.

Arithmetic Sequences Problems with Solutions

The arithmetic sequence general formula is $a_n = a_1 + d \cdot (n-1)$ where d is the arithmetic difference and n is an integer. In this case, upon derivation, the formula that represents the sum of the series is $S = (a_1 + a_n) \cdot (n/2)$.

In mathematics, a divergent series is an infinite series that is not convergent, meaning that the infinite sequence of the partial sums of the series does not have a finite limit.. If a series converges, the individual terms of the series must approach zero. Thus any series in which the individual terms do not approach zero diverges.

Over the years, a variety of floating-point representations have been used in computers. In 1985, the IEEE 754 Standard for Floating-Point Arithmetic was established, and since the 1990s, the most commonly encountered representations are those defined by the IEEE.. The speed of floating-point operations, commonly measured in terms of FLOPS, is an important characteristic of a computer system ...
