A chemical bond is a lasting attraction between atoms, ions or molecules that enables the formation of chemical compounds. The bond may result from the electrostatic force of attraction between oppositely charged ions as in ionic bonds or through the sharing of electrons as in covalent bonds. The strength of chemical bonds varies considerably; there are "strong bonds" or "primary bonds" such as ...

In a chemical reaction, chemical equilibrium is the state in which both reactants and products are present in concentrations which have no further tendency to change with time, so that there is no observable change in the properties of the system. Usually, this state results when the forward reaction proceeds at the same rate as the reverse reaction. ...

Any alkali added to the solution is consumed by the hydronium ions. These ions are mostly regenerated as the equilibrium moves to the right and some of the acid dissociates into hydronium ions and the conjugate base. If a strong acid is added, the conjugate base is protonated, and the pH is almost ...

The octanol-water partition coefficient K_p , calculated or experimentally determined for new molecules to describe their lipophilic/hydrophilic nature and to make predictions on their behaviour in biological systems, can suggest how the drug will distribute in two-phase solvent systems. Because both octanol and water show some finite solubility in one another, the K_p value can only be ...

The gas constant (also known as the molar, universal, or ideal gas constant) is a physical constant that is featured in a number of fundamental equations in the physical sciences, such as the ideal gas law and the Nernst equation. It is expressed in units of energy (that is, the pressure-volume product) per kelvin per mole. It is equivalent to the Boltzmann constant, except that the latter is ...

Introduction. Essential oils are composed of lipophilic and highly volatile secondary plant metabolites, reaching a mass below a molecular weight of 300, that can be physically separated from other plant components or membranous tissue (Protzen 1993; Grassmann and Elstner 2003; Schmidt 2010; Sell 2010). As defined by the International Organization for Standardization (ISO), the term ...

1. Introduction. The term natural gas refers to hydrocarbon-rich gas; it is a gaseous fossil fuel that

is found in oil fields, natural gas fields, and coal beds (Carroll, 2010, Speight, 2007). The first recorded natural gas well was drilled by William Hart, who is considered to be America's "father of Natural Gas," in 1821 in Fredonia, United States.

Protein structure determination. In terms of the accuracy of protein structure determinations, all of the bond lengths are invariant. Bond angles are also essentially invariant, except perhaps for the backbone N-C alpha-C angle. The alpha-carbon is tetrahedral, which would give 110°, but there are indications from accurately refined protein structures (Deisenhofer and Steigemann, 1975 ...
