To begin, I ask students to think back to our Classifying Living Things lesson, where they grouped organisms in a variety of ways. I explain that today, they are classifying specific kinds of animals. Vocabulary Preview. I direct students' attention to the words vertebrate and invertebrate written on the board and ask: What do you think these words mean?

Lesson Day 1- Vertebrates vs Invertebrates | BetterLesson

The brain is an organ that serves as the center of the nervous system in all vertebrate and most invertebrate animals. The brain is located in the head, usually close to the sensory organs for senses such as vision. The brain is the most complex organ in a vertebrate's body. In a human, the cerebral cortex contains approximately 14-16 billion neurons, and the estimated number of neurons in ...

What is a Parasite? - Definition, Types & Examples - Video ...

Insects or Insecta (from Latin insectum) are hexapod invertebrates and the largest group within the arthropod phylum. Definitions and circumscriptions vary; usually, insects comprise a class within the Arthropoda. As used here, the term Insecta is synonymous with Ectognatha. Insects have a chitinous exoskeleton, a three-part body (head, thorax and abdomen), three pairs of jointed legs, compound ...
