Chemistry is the natural science involved with elements and compounds composed of atoms, molecules and ions: their composition, structure, properties, behavior and the changes they undergo during a reaction with other substances.. In the scope of its subject, chemistry occupies an intermediate position between physics and biology. It is sometimes called the central science because it provides ...

Equilibrium chemistry is concerned with systems in chemical equilibrium. The unifying principle is that the free energy of a system at equilibrium is the minimum possible, so that the slope of the free energy with respect to the reaction coordinate is zero. This principle, applied to mixtures at equilibrium provides a definition of an equilibrium constant.

Application Suitable as a hydrogenation catalyst for aromatic, olefin, nitrile and nitro group reductions. Used as reducing agent for hydrogenation of organic compounds, e.g. hydrogenation of nitriles to amines, reduction of aromatic groups to the corresponding saturated compounds, hydrogenation reaction of β -keto esters, rreduction of amination, and also used as 3-alkylation of oxindole with ...

En chimie, plus particulièrement en chimie inorganique, un complexe est un édifice polyatomique constitué d'une ou de plusieurs entités indépendantes (ions ou molécules), en interaction.L'étude des complexes trouve plusieurs applications en catalyse, en chimie organométallique et en chimie bioinorganique.Un complexe est souvent constitué d'un cation métallique entouré de plusieurs ...
