Antenna Azimuth Position Control System Solution - If you ally compulsion such a referred antenna azimuth position control system solution ebook that will come up with the money for you worth, acquire the certainly best seller from us currently from several preferred authors. If you desire to funny books, lots of novels, tale, jokes, and more fictions collections are then launched, from best seller to one of the most current released.

You may not be perplexed to enjoy all ebook collections antenna azimuth position control system solution that we will completely offer. It is not in relation to the costs. It's not quite what you compulsion currently. This antenna azimuth position control system solution, as one of the most in action sellers here will agreed be along with the best options to review.

Commanding the place of an antenna is called azimuth. (t) as input is the purpose of this scheme. System concept for controlling the position of antenna azimuth is shown in Fig. 2 (Okumus et al., 2012). Fig. 2 – Antenna position control system concept.

#### RADIO TELESCOPE ANTENNA AZIMUTH POSITION CONTROL SYSTEM ...

The antenna azimuth position control system turns the input command in output position. This system is widely used in antennas, robots and computers disks. In this paper we present the systems that are managed with azimuth antenna. We're going to show how the system works and how its performance can be improved.

#### Modeling and Simulation of Antenna Azimuth Position ...

Introduction; A position control system converts a position input command to a position output response. Position control finds widespread applications in antennas, robot arms, and computer disk drives. The radio telescope antenna in Fig. 1 is one example. The purpose of this system is to have the azimuth angle output follow the input angle.

The antenna azimuth control system currently available on the market is described as a servo controlled antenna through the use of gears and feedback potentiometers. The current design lacks any sort of compensator controller that would provide stability control.

Two major control loops of the antenna control system are the position loop and rate loop. The position loop drives the antenna based on a desired angle command. Figure 1 is a func- tional block diagram of a typical position control loop. A major component of the position loop is the rate loop.

Abstract: In this study, an antenna azimuth position control system is controlled by using a Proportional-IntegralDerivative (PID) controller and a fuzzy logic controller (FLC) designed in Matlab/Simulink environment. In order to obtain the best system response with FLC, different types of fuzzy rules and membership functions are tested. System responses with proposed controller and PID ...
