A cone with a region including its apex cut off by a plane is called a "truncated cone"; if the truncation plane is parallel to the cone's base, it is called a frustum. An "elliptical cone" is a cone with an elliptical base. A "generalized cone" is the surface created by the set of lines passing through a vertex and every point on a boundary (also see visual hull).

Modern Triangles. More recently, starting in the 17-th century with Descartes and Fermat, linear algebra produced new simple formulas for area. In 3 dimensional space (3D), the area of a planar parallelogram or triangle can be expressed by the magnitude of the cross-product of two edge vectors, since where is the angle between the two vectors v and w.

Ellipse as a locus. The ellipse is defined as the locus of a point `(x,y)` which moves so that the sum of its distances from two fixed points (called foci, or focuses) is constant.. We can produce an ellipse by pinning the ends of a piece of string and keeping a pencil tightly within the boundary of the string, as follows.
