where is a constant of integration (Weinstock 1974, pp. 24-25; Arfken 1985, pp. 928-929; Fox 1988, pp. 8-9).. The Beltrami identity greatly simplifies the solution for the minimal area surface of revolution about a given axis between two specified points. It also allows straightforward solution of the brachistochrone problem.

Overview. The most basic type of integral equation is called a Fredholm equation of the first type, = \int (,) (). The notation follows Arfken. Here ϕ is an unknown function, f is a known function, and K is another known function of two variables, often called the kernel function. Note that the limits of integration are constant: this is what characterizes a Fredholm equation.

In physical science and mathematics, Legendre polynomials (named after Adrien-Marie Legendre, who discovered them in 1782) are a system of complete and orthogonal polynomials, with a vast number of mathematically beautiful properties, and numerous applications. They can be defined in many ways, and the various definitions highlight different aspects as well as suggest generalizations and ...

Lo stesso argomento in dettaglio: Equazione differenziale lineare di ordine superiore al primo. La soluzione generale di un'equazione ordinaria di ordine generico si ottiene dalla somma della soluzione dell'equazione omogenea più una soluzione particolare dell'equazione non omogenea, ottenuta con il metodo delle variazioni delle costanti o con il metodo dei coefficienti indeterminati.
